

Match up the rainforest beings!

Western Red Cedar

Called the Tree of Life by Coast Salish people, its branches droop in a J-shape and it has fibrous, stringy bark. The leaves look like small scales.

Salal

A larger, broad ground-cover plant with waxy leaves. In the summer, salal has large clusters of bell-shaped dark blue to purple berries.

Red Huckleberry

A shrub with small, bright oval-shaped leaves. It grows red, round berries that are edible.

Douglas Fir

Its cones have pointed bracts between each woody scale. Look for a three-pointed bract on its cone.

Sitka Spruce

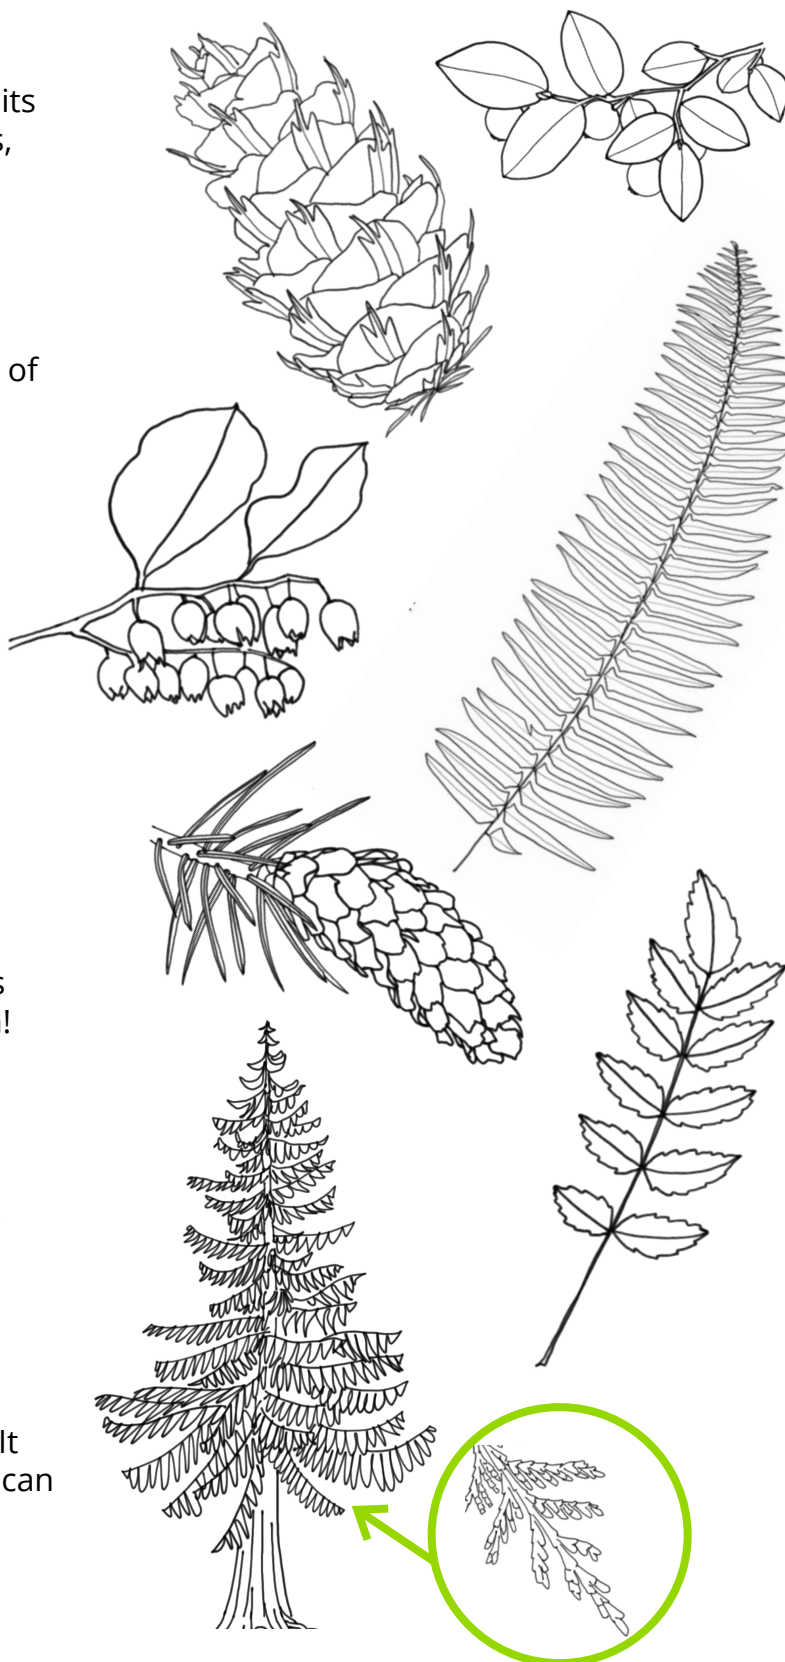

Their stiff, sharp needles point out on all sides from the branch. They are prickly to the touch! The cone has smooth scales like a fish.

Sword Fern

The blade is lance-shaped and each blade has alternating leaflets that grow out of a central stipe (stem).

Oregon Grape

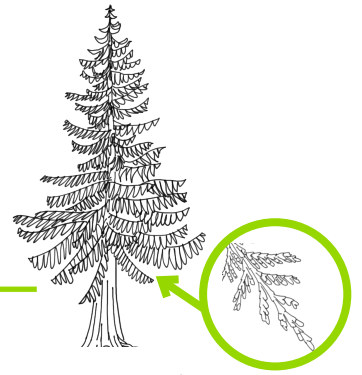

Their leaves are egg-shaped with spiny teeth. It looks like holly. Be careful, their pointy leaves can poke you!
